

HMC EM EVIDENCE-BASED CLINICAL ALGORITHM: ACS RISK STRATIFICATION SCORES

Version date: 25 April 2015

Authors: S Abdullah (Cardiology), A Ali (EM), A Arabi (Cardiology), W McKenna (Cardiology), Y Sharma (EM), S Thomas (EM)

Evidence basis: EM Cardiac Research & Education Group monograph: Coagulation catastrophes. January 2015 (www.emcreg.org)

This EBCA:

- has been endorsed by HMC EM and Cardiology consultants for education and assistance with clinical practice in HMC's EDs.
- is intended to complement any related multispecialty Clinical Practice Guideline prepared as per HMC policy.
- is not presented as the binding "standard of care" but is rather a reference tool to inform clinical judgment.

Algorithm aim & applicability:

This algorithm aims to provide ACS risk stratification scores for ED physicians evaluating patients without STEMI but for whom ACS needs to be considered; this algorithm is intended to complement the EBCA [ACS RuleOut](#).
